COR100 Snap! Programming

Practice 2 - Sequences

1. Define a new project "Sequence" and build this script in your Snap! dashboard. You can pick a non-standard sprite if you like.

2. [This is how the result should look like \(video\).](#)

Figure 2: screenshot - sample Snap! script (Source: Joshi)

3. When you try to run the script a second time, nothing happens. What could you do to re-run it properly?

Add the Looks : : show command at the top.

4. Make the change and re-run the script.

5. Save the [Sequence](#) project to the cloud and find it in **My Projects**.
